# 2. Types of Targets and Their Effectiveness

2.1 Emissions Intensity by Target Type (No Winsorization)

2.3 Target Progress and Emissions Trends (No Winsorization)

Figure 2.1: Bar chart showing Median Emissions Intensity (Scope 1+2) by target type — Absolute: 27.6, Production intensity: 65.4, Sales intensity: 28.2, Others?: 44.9. Annotation: "Companies using absolute targets have lower emissions intensity levels than those using production intensity targets"

Figure 2.3: Bar chart showing 3-Year Emissions Trend (%) (Scope 1+2) by TARGET_CARBON_PROGRESS_PCT (% progress toward reduction target, >100% = target exceeded). Values: 0-25%: -5.4%, 25-50%: -6.6%, 50-75%: -7.1%, 75-100%: -6.5%, 100-125%: -6.8%, 125-150%: -6.1%, 150-175%: -7.7%, 175-200%: -8.7%. Annotation: "Targets with 175-200% progress show best trend (-8.7%, n=236). Higher values indicate targets exceeded by a larger margin"
